See Them Perform on Your Balance Sheet

- Trucks ideal for long distance and heavy loads
- With high torque engines optimized for power and economy
- Smooth double-synchronizer transmissions with extra-large gears
- Chassis with shot-blasted and powder coated, full-depth long members
- Parabolic suspension for cabin comfort, multi-leaf suspension for heavy loads
- Inter-wheel and inter-axle differential lock and front anti-roll bars
- Safe, comfortable, fully suspended, all-steel crash-proof cabins
- Intelligent instruments. Variable green band shows fuel-efficient zone.

Perfect for Hauling Containers and Numerous other Applications

For high-speed hauling, containers, the applications are endless

Solid, stable, rugged chassis

Short turning radius, great maneuverability

Choice of heavy duty or fuel saving engines

When Roads are Rough and the Load is Heavy

Handles heavy and tall loads with ease

Engine optimized for power and better economy

Built rugged and durable in every component

Shot blasted and powder coated, full-depth members chassis

Safe, comfortable, fully suspended sleeper cabin

Built to Perform for the Long Haul

Powered for Efficiency

With ECU-controlled unitized fuel injection and a high boost turbocharger, fuel burns with maximum efficiency. The constant throttle valve engine brake prevents overrunning and cuts fuel supply when driving downhill, further increasing mileage and reducing costs.

Smoother and More Durable

Double synchronizers smooth gear-shifting, while bigger gears and bigger clutch plate add torque and increase durability.

Strong, Rugged and Reliable

With thick (9mm), full depth (288mm) long members, this chassis adds the extra strength required for heavy loads. The frame is shot blasted and powder coated to add the durability required for reliable performance on rough roads.

With Feet Firmly on the Ground

Anti-roll bar in front is standard. It works with the wider wheel track to maintain stability when tall loads raise the center of gravity.

All Performance, No Spin

Inter-wheel and inter-axle differential lock prevents one wheel spinning making driving easily in slushy or bogged down conditions. Inter-wheel and inter-axle differential lock standard on FZ 6x4. Inter-wheel differential lock standard on FZ 4x2.

Bring on the Heavy Loads

Taller stacks, with more main and helper springs, increase the load carrying capability of the laminated, multi leaf rear suspension (Bogie suspension on rear axles for FZ 6x4)

Profit from Fewer Pauses

Long service intervals reduce down time, making your business more profitable.

Delivering the Goods with Safety and Comfort

Convenient overhead console box.

Just the Way a Driver Likes it

The fully suspended cabin reduces bumps and vibrations. The fully sealed cabin floor cuts heat and noise. Ergonomic design and blower, fully adjustable seats and tilt-and-telescoping steering wheel increase driver comfort. All in a crash safe, all steel cabin with a three-piece steel bumper for greater safety and easy repairs.

Everything a Driver Needs to Know

Average fuel consumption? How far the truck has traveled? How much fuel has been consumed? The LED display with Trip Mileage Indicator provides the answers quickly and clearly.

Making It Simple to Stay in the Zone

Variable Green band light glows to warn driver if driving at high rpm in low gear or low rpm in high gear. Shifting to appropriate torque saves fuel and reduces engine and power train wear.

A Step Up in Every Way

With a wider opening door, steps and hand grips, getting in and out is easy. Open the rear windows to increase ventilation or close them for a quieter ride. Add optional air conditioning for even greater comfort.

Safe and Stable on Your Balance Sheet

For Effective and Safe Braking

Heavy duty wider and thicker brake linings of same-size on front and rear.
High capacity compressor with bigger air tanks.

Increased Stability for All Driving Situation

Anti-roll bars in front plus wider wheel track increase stability, which is vital on rough roads or in extreme driving conditions.

Every Component is Proven Technology

Every component is proven technology that has survived over 11 million kilometers on the test track and been proven in use worldwide.

The Reliable Service You Need

Service combining state-of-the-art digital technology with highly trained mechanics is available from your FUSO dealer.

Every Truck Must Pass Through All Quality Gates

FUSO trucks are built at a state-of-the-art manufacturing facility, which also trains our service personnel. They are rigorously inspected at every step of the manufacturing process.

All for you

At FUSO we design and build trucks to maximize our customers' profitability. We build them strong and reliable, to need less frequent maintenance. We build them fuel-efficient, to lower running costs. We build them safer and more comfortable, to minimize driver fatigue. Everything that we build into them is designed to lower your total cost of operation and maximize your profits. It's a virtuous cycle: By making your business more profitable, we grow our business, too. It's all for you.
