Headquarters and Kawasaki Plant Achieves ISO 45001 Certification

- **MFTBC Headquarters and Kawasaki Plant receive certification**
- **Advancing workplace safety, health, productivity and quality**

KAWASAKI, JAPAN, NOVEMBER, 4, 2026 - Mitsubishi Fuso Truck and Bus Corporation (MFTBC) has acquired certification for ISO 45001:2018 ("ISO 45001"), the international standard for occupational health and safety management systems, at its headquarters and Kawasaki Plant in Kawasaki City, Kanagawa Prefecture.

ISO 45001 is a globally recognized framework established by the International Organization for Standardization (ISO). It defines the systems and operational processes required to prevent work-related injuries and illnesses and to ensure that employers provide a safe and healthy workplace. The standard requires continuous improvement through the PDCA (Plan-Do-Check-Act) cycle, including management commitment to occupational health and safety policies, identification of hazards and risks and implementation of appropriate countermeasures, compliance with applicable laws and regulations, establishment of occupational health and safety objectives, and the development, implementation, evaluation, and improvement of occupational health and safety plans.

MFTBC will use the ISO 45001 framework to further strengthen a proactive occupational health and safety management system that promotes a workplace free from injuries and helps prevent harm to both employees and others, while standardizing occupational health and safety processes. Through these efforts, MFTBC aims to create a work environment where employees can work with confidence and safety, eradicate workplace accidents and occupational illnesses, and contribute to the steady improvement of productivity and quality.
